

Please correct the **left sidebar** of this screen. The sidebar is currently overlapping with the main content and some text/buttons are not properly aligned or visible.

2. Site Visit Inactivity Alert

If a user does **not upload a site-visit photo for 3 consecutive days**, the system should automatically send an alert message via **Telegram** to the concerned **ZO and HO**.

The Telegram message should include:

- **Work Order No.**
- **User/Employee Name**
- **Last Site Visit Date**
- A clear message stating that the person has **not uploaded any site-visit photo since the last recorded site visit**.

Example Telegram Message:

⚠ Site Visit Inactivity Alert

Work Order: BAN01

Employee: [Name]

Last Site Visit: 05-Aug-2026

No site-visit photo has been uploaded for the last 3 days.

Please check and take necessary action.

3. Work Order Number – Font Size and Boldness

The **Work Order Number** text is currently too small and difficult to notice.

Please update the design as follows:

- Increase the **font size** of the Work Order Number.
- Make the Work Order Number **bold**.
- It should be clearly visible and easy to identify at a glance.
- Maintain the existing overall design and alignment of the card.

4. Fund Request Screen – Required Changes

4(a) Add Three Fields After “Work Order No.”

In the Fund Request List screen, add the following three fields immediately after **Work Order No.**:

1. **Work Order Value** – Display the total value of the respective Work Order.
2. **Estimated Value** – Display the total estimated value applicable to the Work Order.

The values should be automatically calculated and displayed based on the respective Work Order and approved fund requests.

4(b) Quick Filter – Work Orders with No Fund Request Sent to HO

In the **Quick Filters** section, add a filter to show **all Work Orders for which no Fund Request has yet been sent from ZO to HO**.

When this filter is selected, the system should display only those Work Orders where **no Fund Request has been submitted to HO yet**.

Suggested filter name:

Fund Request Not Sent to HO

4(c) Quick Filter – Remaining Fund Request

Add a new **Quick Filter: “Remaining Fund Request”** on the Fund Request screen.

When selected, the system should display only those **Work Orders where there is still a remaining amount available for Fund Request, calculated based on the Estimated Value.**

Calculation Logic:

Remaining Fund Request Amount = Estimated Value – Total Fund Request Amount Already Submitted/Approved

Example:

- Estimated Value = ₹10,00,000
- Total Fund Request Amount = ₹7,00,000
- **Remaining Fund Request Amount = ₹3,00,000**

In this case, the Work Order should appear under **“Remaining Fund Request”**.

If the Total Fund Request Amount has already reached the Estimated Value, the Work Order should **not** appear in this filter.

Important: The calculation must be based on **Estimated Value**, not **Work Order Value**.

5. RA / Final Bill Entry Screen – Payment Type Update in Filter

Add a new **Payment Type** option named **“No RA Bill”** to the existing Payment Type dropdown.

Required Functionality:

- Add **“No RA Bill”** as a selectable option under **Payment Type**.
- When the user selects **“No RA Bill”**, the system should display only those **Work Orders against which no RA Bill has been entered/processed yet**.
- Work Orders that already have one or more RA Bills should **not** appear in this filtered list.
- The filter should work dynamically based on the existing RA Bill records in the system.

Example:

If 10 Work Orders exist and RA Bills have already been entered for 6 Work Orders, selecting **“No RA Bill”** should display only the remaining **4 Work Orders where no RA Bill has been entered**.
